

STANDARD FIXING ON STRUCTURE WOOD with TILES roofing

Ladder hook

BWOOD-C

Single anchor point

BWOOD

BWOOD: THE ADAPTED ANCHOR POINT SOLUTION FOR WEAK WOODEN STRUCTURES

- ▲ Adjustable anchor point, including or not a ladder hook
- ▲ Includes a patented activation mechanism, which allows to keep the load in the axis of the rafter. This feature allows the fixing on very small wood profiles (36x60mm) used on wooden frames
- ▲ Installed directly with 4 lag screws (included) on the wooden rafter or structure
- ▲ Made of galvanised steel (also available in RAL color 8012)
- ▲ Lateral adjustment for aligning the anchor support with the tiles channel when it is not in the axis of the rafter (setting range: 180mm)
- ▲ Big anchor hook which allows the use of any type of connectors
- ▲ Installation without cutting the roof-boarding screen (rain-barrier, vapour-barrier)
